

## Other varieties sugar

Sugar (the word stems from the Sanskrit sharkara) consists of a class of edible crystalline substances including sucrose, lactose, and fructose. Human taste buds interpret its flavor as sweet. Sugar as a basic food carbohydrate primarily comes from sugar cane and from sugar beet, but also appears in fruit, honey, sorghum, sugar maple (in maple syrup), and in many other sources. It forms the main ingredient in much candy. "Excessive" consumption of sugar has been associated with increased incidences of type 2 diabetes, of obesity and of tooth decay.

### Current State of Global Sugar Trade

The current trade in world sugar (for 2006/2007) is estimated at 45.4 million tones. Brazil (18.6 percent), the EU (13.7 percent), India (13.3 percent), and China (7.2 percent) are the world's top sugar producers. In 2008, India is expected to surpass Brazil as the largest sugar producer in the world.
